Submit Paper / Call for Papers

Journal receives papers in continuous flow and we will consider articles from a wide range of Information Technology disciplines encompassing the most basic research to the most innovative technologies. Please submit your papers electronically to our submission system at https://www.jatit.org/submit_papers.php in an MSWord, Pdf or compatible format so that they may be evaluated for publication in the upcoming issue. This journal uses a blinded review process; please remember to include all your personal identifiable information in the manuscript before submitting it for review, we will edit the necessary information at our site.

What do we look for in your Research while conducting blind Peer Review

1) Relevance
Its contents have to be of use to anyone practicing one of the disciplines addressed by the journal.

- The paper is relevant to the technical scope of the journal and to the professional interests and activities of its audience.
- Ideally it should present new knowledge or technology that has the potential to help the reader in their professional work as practicing scientists / engineers.

2) Innovation
It should present new knowledge or technology, or analyze previously known facts in a new way.

- A paper should present new knowledge or analyze previously known facts in a new way. Additionally it should take full account of previously published work on its subject.
- A case history is appropriate if it presents the application of existing technology in a new way or in a new location or environment where it has not previously been used and that requires new and previously un-used techniques or analyses.
- A review paper is appropriate if it finds connections between previously unrelated facts or commonality between previously unconnected facts and results, or makes deductions that give the reader substantiated guidance on the accuracy and applicability of the reviewed analyses.

3) Technical Detail
It should be logically sound, and it should give sufficient detail to allow the reader to replicate the work it describes and to assess its applicability to other environments.

- The research design, methods, and analyses are adequately defined and clearly described, well integrated, well reasoned, and appropriate to the aims of the project.
- The paper should present sufficient detail of the application, methods and analyses employed and results achieved to allow the reader to replicate the work described but also to evaluate its applicability to the environment and problems on which they are working.
- Statistical / Analytical tests are appropriate and the assumptions underlying the use of statistics are fulfilled by the data.
- The statistics are reported correctly and appropriately.
