Dear Dr. Tudor Papuc

The method :

During biogas production, parameters observed are the pH and volume of the gas done every day.

gas composition analysis using chroma gas toography. Current gas chromatography conditions the process is the temperature of the carrier gas and the detector which is 200oC, while the column temperature is 150oC.

The flow rate in the column is 43 mL / min.

Data on the composition of the gas produced

of GC expressed in percent.  
The data is used to calculate  
the volume of methane gas produced

Thank you,

Please tell me the method by which you determined the gas composition (methane, nitrogen...) here, in a message, so I can write it in the text.

There are more corrections that need to be made.  
Read the comments and make the corrections. After this, maybe we can publish it.  
Also, please agree with this form of the manuscript for publication.

Please take more care when doing the corrections, because last time you made it worse...

Also, please be more careful when citing other works... a lot of references are not cited in the text.

Hello,

Please find attached the paper with the reviewer comments.  
There is also a model of paper attached, because you need to format the paper, the citations and references, and write the authors full names, affiliations and email addresses.  
Also, please try to correct the English, because it is very bad.

After you make the corrections, please send the manuscript back to me.

Best Regards,  
Tudor Păpuc

Hello,

Thank you for the payment. Yes, the swift key and the info were the ones you mentioned, as stated in the payment details email.  
The bank transfer usually takes a few days, but as soon as it is confirmed (it will be, no problem here), I am sending you the reviews.

Best Regards,
