Reviewer Comment	Response of author
Reviewer 1	
Further analysis of regression	The author added the coefficient of determination as a result of further analysis
The reason for using the relationship model between the independent variable and the dependent variable	Authors added Lewis's theory, Chambers' theory and Sharp's theory as a basic reference for determining models
An explanation of the analysis results about the coefficient of determination	Authors clarified the coefficient determination
Clarification about the novelty	Novelty: combination method of internal factors of low-income families with poverty alleviation strategies. With this strategy, the government will be able to reduce the culture of poverty by activating the potential of education and other social variables
Reviewer 2	
The reason for using the regression analysis	Clarification about the reason of choosing analysis : Regression analysis aims to obtain contribution the independent variables on the dependent variable. The analysis has various advantages, namely ease of description and a control tool for essential variables. Evaluation of the results of regression analysis with simultaneous testing is a significance value smaller than 0.05 indicating the influence of independent variables on the dependent variable. The further analysis is the coefficient of determination which indicates the proportion of the influence of the independent variable on the dependent variable. The evaluation of the results of the partial test is to find out the significance level partially between the independent variable and the dependent variable
The reason for choosing variables	The authors chose the variables based on the sociology theory of society from Lewis's theory, Chambers theory and theory Sharp

Clarification of paper contribution	The authors clarify about paper contribution : The strategy as the result of research contributes as a policy choice for the central government and local government in reducing poverty

Dear Dr. Rusman Rasyid,

Congratulation on acceptance of your article and we would like to thank you for choosing **Academy of Strategic Management Journal** to publish your work.

Herewith, we are sending the galley proof of your manuscript and Invoice **1939-6104-17-6-304** as an attachment to this mail.

Please check the proof carefully and send your response within 48 hours. You are requested to correct the misprints, if any.

If you have any correction(s), please mention them in the Galley proof directly, preferably using the "comment" option in the PDF file and send it as soon as possible.

Type the misprints in separate word file in two columns, one column for misprinted version and the other for the corrected version to be printed.

*If you fail to intimate us regarding the corrections within 48 hours, we may assume that you agreed to publish without any further modifications/corrections.

Please complete the payment process in a week time and you may use the following link for this purpose.

Payment online link: <http://www.alliedacademies.org/onlinepayment/>

If you need more information, please do not hesitate to contact us.

Thanks & Regards,
Olivia Noah

Nurlita Pertiwi, Universitas Negeri Makassar, Sulawesi Selatan

Abstract

This paper describes the factors that influence the income of poor households in the city of Makassar along with alternative remedies. The research method is explanatory research with a quantitative approach. The study involved 100 heads of poor households as respondents. The sample is determined by the proportional area random sampling method. Data analysis using multiple linear regression method with F-test and t-test. Determination of alternative poverty alleviation was analyzed by the AHP method. The results showed that the age and education level of the head of the family affected family income. The best alternative to handling poor (low income) families in Makassar City through increasing economic access and knowledge and skills related to increasing community income.

Keywords

Income, Age, Education.

Introduction

Urban characteristics are related to the quality of the population which is characterized by three characteristics: dependence on the money economy (commoditization), poor living environment (environmental hazards) and social life of individualistic (social fragmentation) (Brierley, 2017; Ferré et al., 2010). Urban poverty has a multidimensional phenomenon which includes low levels of income, health and education, housing and personal vulnerability, and powerlessness. Some previous studies describe that cities with high economic growth do not guarantee reduced levels of poverty. Income gaps are very likely to occur in several cities in the world. Poor people's access to resources and essential services is also not comparable to other residents. Likewise with the fact of low social protection and personal security guarantees.
